

Drag and drop each of the variables into one of the four categories to indicate whether it is a function name, variable name, constant name, or none of those. The variables will be placed in the correct category.

Function Names

CreateTable

Hint

All words are uppercase.

Variable Names

treeFormula

data.full

x1

Hint

The first word is lowercase; all others are uppercase or separated by periods.

Constant Names

kThreshold

Hint

The variables begin with 'k'; subsequent words are uppercase.
